[www.facebook.com/MoveSmartSF](https://www.facebook.com/MoveSmartSF)**

**April , 2013**

# There's a lot to like...

- SF projects named 7 of 13 high-performers in region
- Downtown Extension of Caltrain, Van Ness Bus Rapid Transit named regional New and Small Starts priorities
- OBAG program links affordable housing plans and production with greater levels of transportation \$ for first time
- Transit Performance Initiative created, \$500 million in strategic investments to improve transit in urban core

| PROJECT   | Quantitative Benefit/Cost ratio | Qualitative (out of 10) |
|---|---------------------------------|-------------------------|
| 1 BART Metro Program  | > 60                            | 8.5                     |
| 2 Treasure Island Congestion Pricing                        | 59                              | 4.0                     |
| 3 Congestion Pricing Cordon Pilot                           | 45                              | 6.0                     |
| 4 AC Transit Grant—MacArthur BRT                            | 18                              | 5.5                     |
| 5 Freeway Performance Initiative                            | 16                              | 4.0                     |
| 6 ITS Improvements in San Mateo Co.                         | 16                              | 4.0                     |
| 7 ITS Improvements in Santa Clara Co.                       | 16                              | 4.0                     |
| 8 Irvington BART Station                                    | 12                              | 5.5                     |
| 9 SFMTA Transit Effectiveness Project                       | 11                              | 7.5                     |
| 10 Caltrain Electrification and six trains per hour service | 5                               | 7.5                     |
| 11 BART to San Jose, Phase 2                                | 5                               | 7.0                     |
| 12 Van Ness Avenue BRT                                      | 6                               | 6.5                     |
| 13 Better Market Street                                     | 6                               | 6.0                     |

# ... yet challenges remain

## Maintenance and operations shortfall...

|  | Cost to Maintain Current SOGR/O&M Level | Expected Revenue | Shortfall       |
|--|---|------------------|-----------------|
| Local Streets and Roads - System Preservation            | \$3.263 billion                         | \$2.299 billion  | \$0.965 billion |
| Local Streets and Roads - Operations/Routine Maintenance | \$2.84 billion                          | \$2.84 billion   | \$0.00          |
| Transit - Operations                                     | \$35.6 billion                          | \$35.5 billion   | \$0.12 billion  |
| Transit – Capital  | \$8.11 billion                          | \$5.47 billion   | \$2.64 billion  |
| Total  |   |                  | \$3.735 billion |

- The cost to maintain streets and transit at today's levels of repair and operation is \$3.7 billion through 2040. This cost exceeds our expected discretionary revenues of \$3.14 billion
- Why does not forecast SF sufficient revenues to meet Plan Bay Area policy targets? – lack of clarity about the region's proposed allocation of discretionary revenue by operator and municipality
- Transit – Capital only includes SFMTA and Caltrain (SF share) needs to achieve RTP/SCS goal of 70% of “critical” transit capital infrastructure

# ...yet challenges remain

## Worsening transit crowding (2012-2040)

Source: SF CHAMP 4.3

# ...yet challenges remain

## Peak hour auto congestion, and its impacts on transit

**27% reduction in PM peak SoMa private vehicle traffic  
needed to maintain a “saturated” network**

### Gridlock

Carmageddon represents oversaturation of the network, resulting in breakdown i.e. gridlock conditions for motorists and transit vehicles.

### Saturated

The saturation point of the network was determined by reducing baseline prime forecasts until gridlock ceased. Characteristics of the saturated network are long delays, high v/c ratios, poor progression, and queues that often extend to adjacent intersections.

Source: SF-CHAMP 4.3 volumes for “Baseline Prime”, SimTraffic Fehr + Peers, 2012

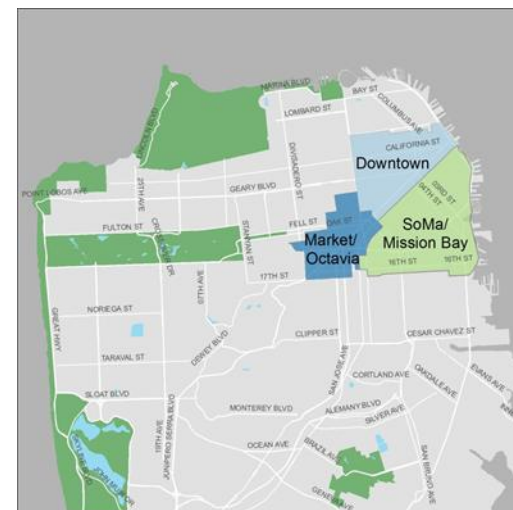

# ...yet challenges remain

## More multi-modal conflicts at intersections

2011 vs. 2035 baseline with developments, pm peak

New Trips by Mode,  
2011 vs. Baseline Prime, pm peak

Source: SF-CHAMP 4.3

# ...yet challenges remain.

## Needs Outstrip Revenue

**Estimated Revenues through 2040:  
\$64 Billion**

**Transportation System Investment Need through  
2040:  
\$74 Billion**

# San Francisco looks forward to partnering with the region in implementation phase

## ► Corridor Studies

- What does the Freeway Performance Initiative look like in SF?
- What does the Transit Performance Initiative look like in SF?

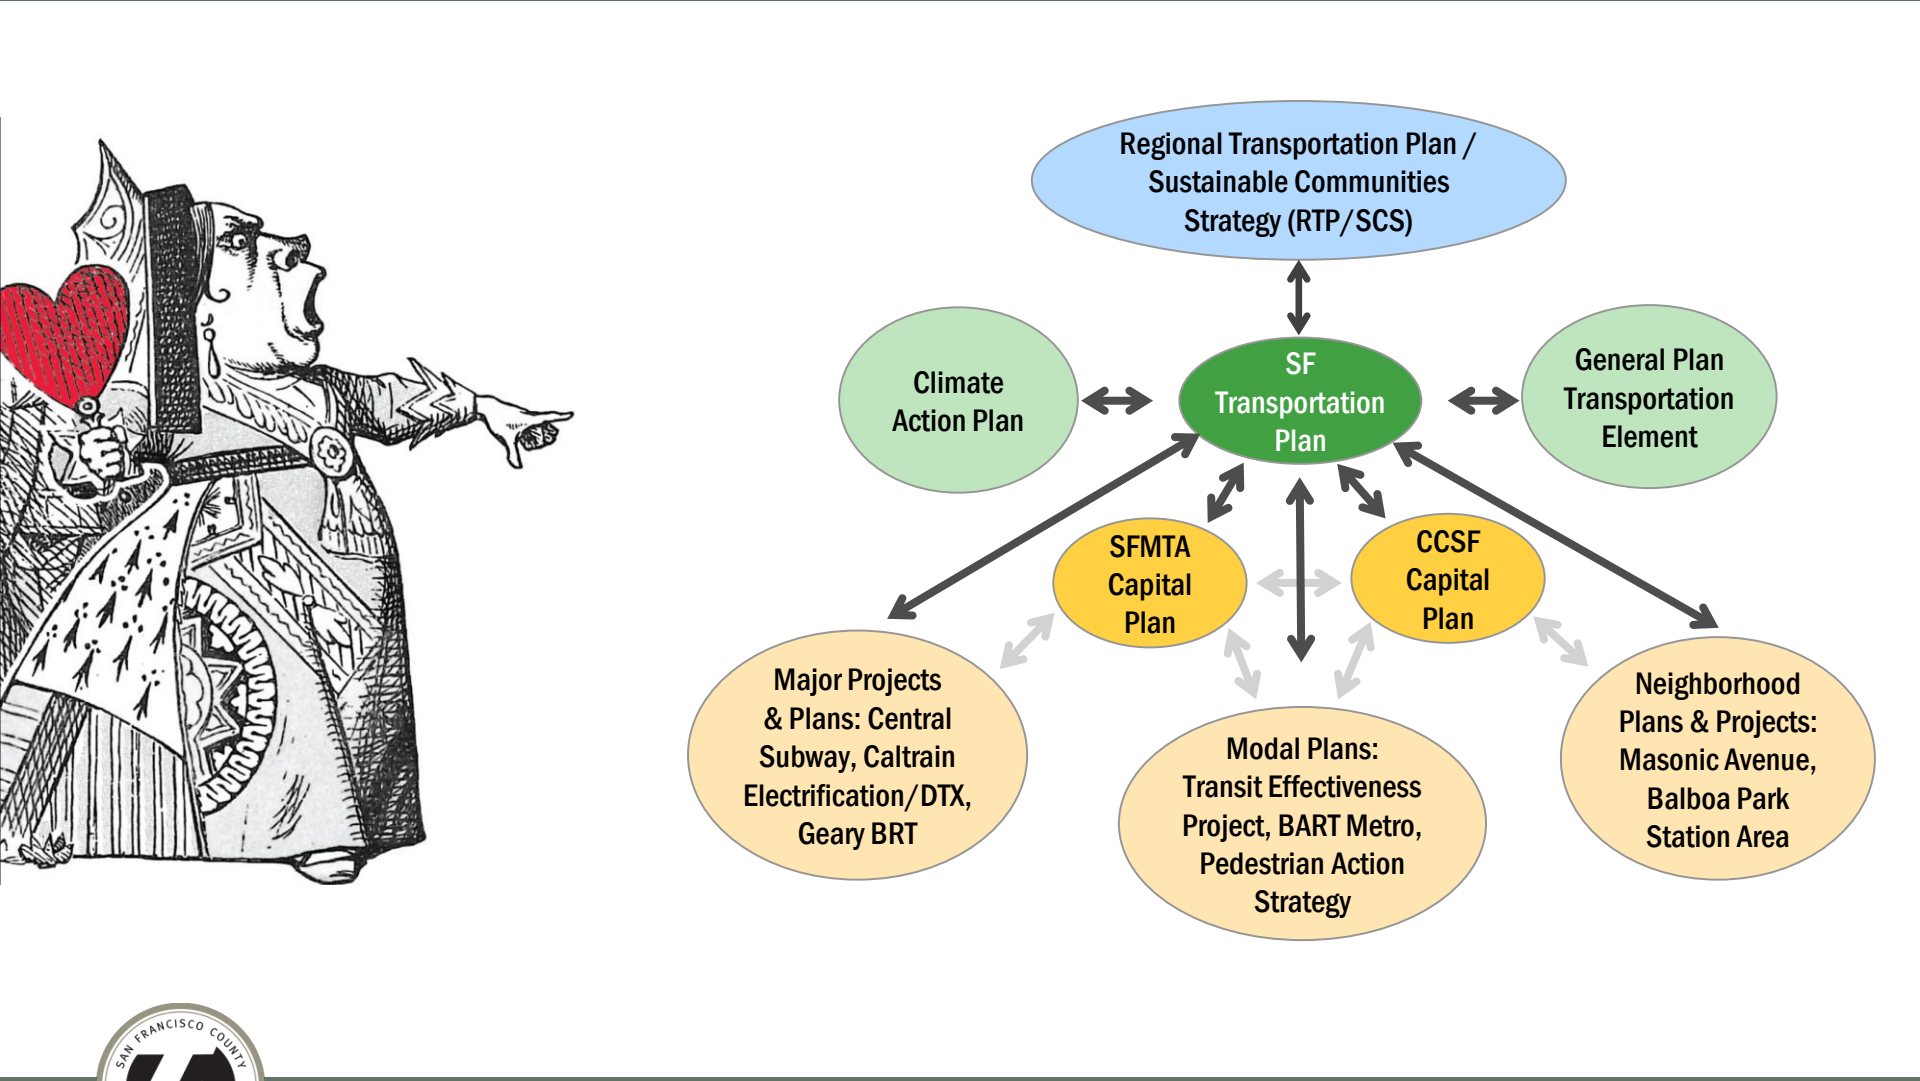

## ► Advocacy

- New revenue sources to grow the pie (e.g. cap-and-trade, tax increment financing successor to redevelopment)

## Enter the San Francisco Transportation Plan ...

## Projected SOMA PM Peak VMT

# Recap on trip analysis findings

**SoMa Vehicle Trips, pm peak**  
**Regional vs. local, trip ends vs. pass-through**

 = estimated share that stays on highway (doesn't touch local SoMa streets)

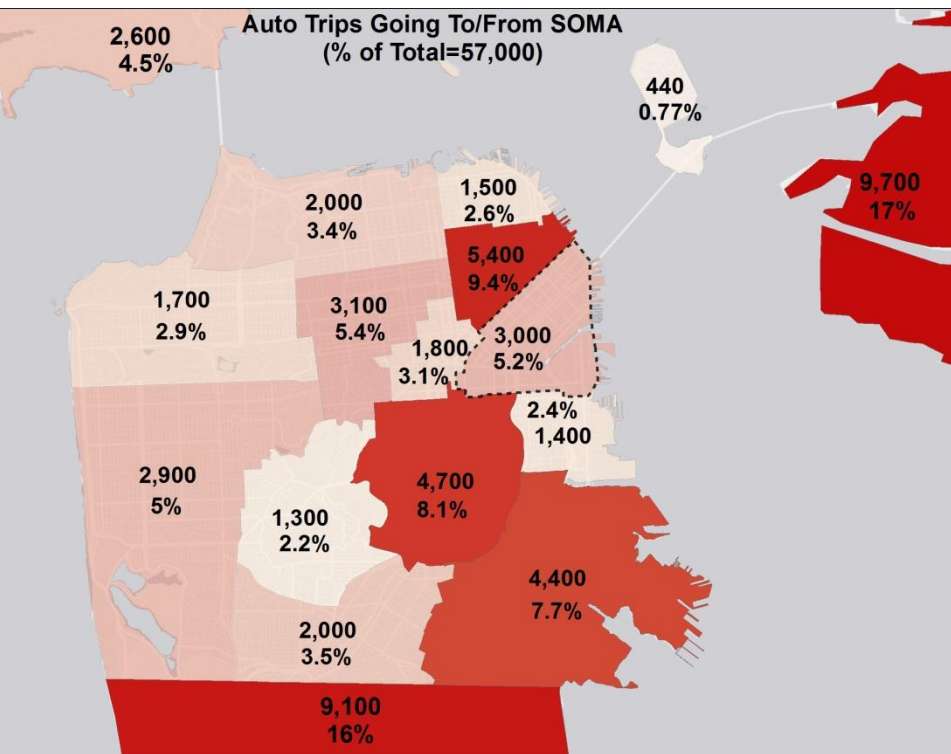

Local Trip End      Regional Trip End  
Local Pass Through      Regional Pass Through

Source: SF CHAMP 4.3, Focused Growth

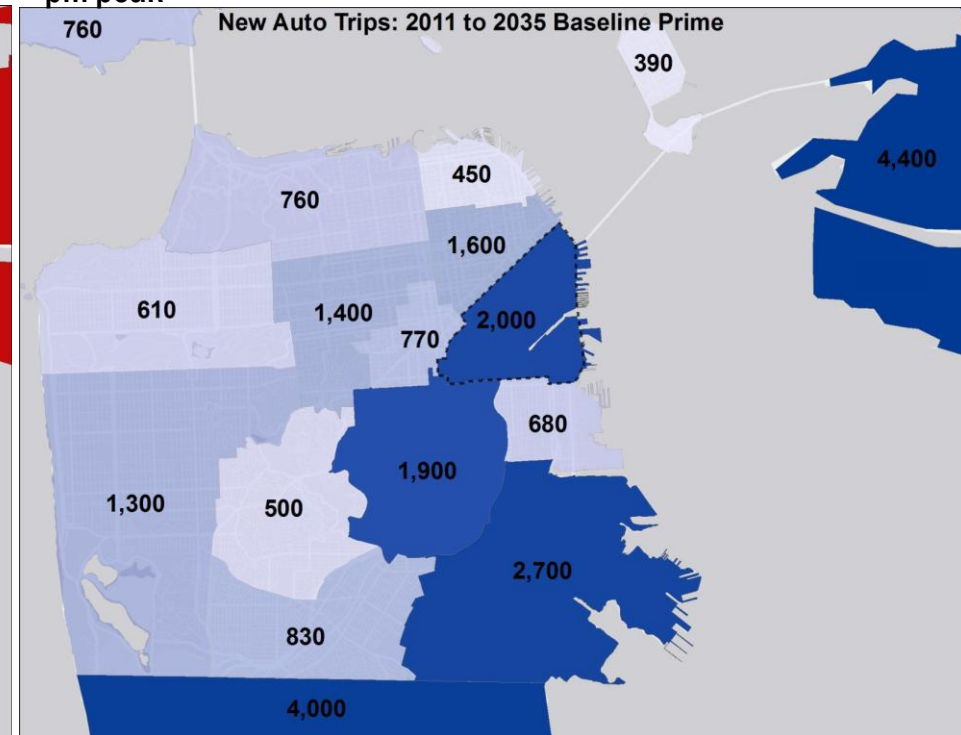

# Where are SoMa auto trip ends coming from/going to? (East Bay, South Bay, Downtown, Mission, Bayview)

- For auto trips, largest markets and largest growth markets are the same
- Exception is growth in internal SOMA auto trips (an opportunity!)

Distribution of SoMa auto trips, baseline prime, pm peak

Distribution of increase in SoMa auto: 2011 vs. baseline prime, pm peak

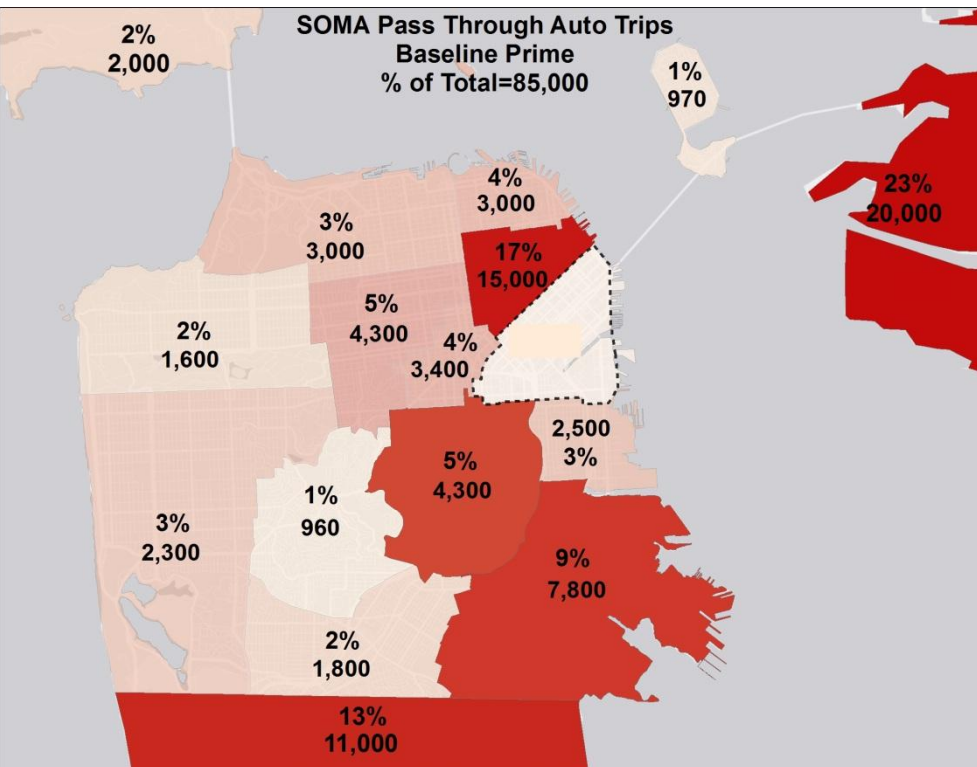

Source: SF CHAMP 4.3, Focused Growth

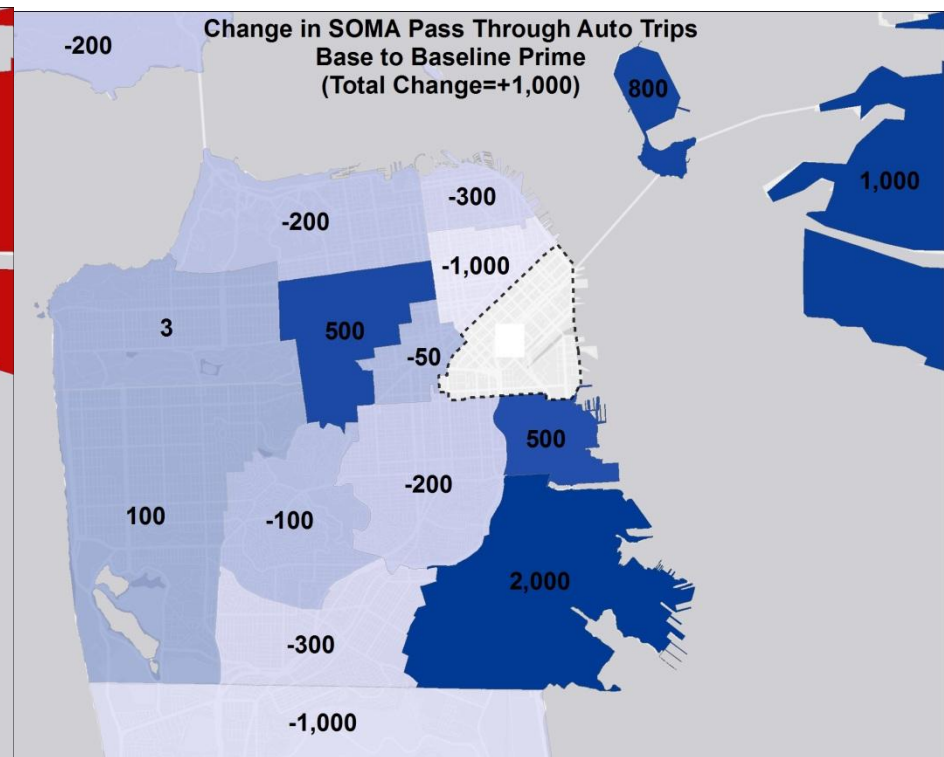

# Where are SoMa pass-through trips headed to/from?

Distribution of SoMa auto pass-through auto trips, baseline prime, pm peak

Distribution of increase in SoMa pass-through auto trips: 2011 vs. baseline prime, pm peak

Source: SF CHAMP 4.3, Focused Growth

# Three Key Problems Revealed

1. Planned Future “breaks” the core network
2. Even with functioning network, transit performance issues are present
3. The increase in overall trip-making and vehicle trips exacerbates existing multi-modal conflicts

# Potential effectiveness of a range of strategies

<sup>\*</sup>Baseline Adjustment

<sup>\*\*</sup>includes Baseline Adjustment

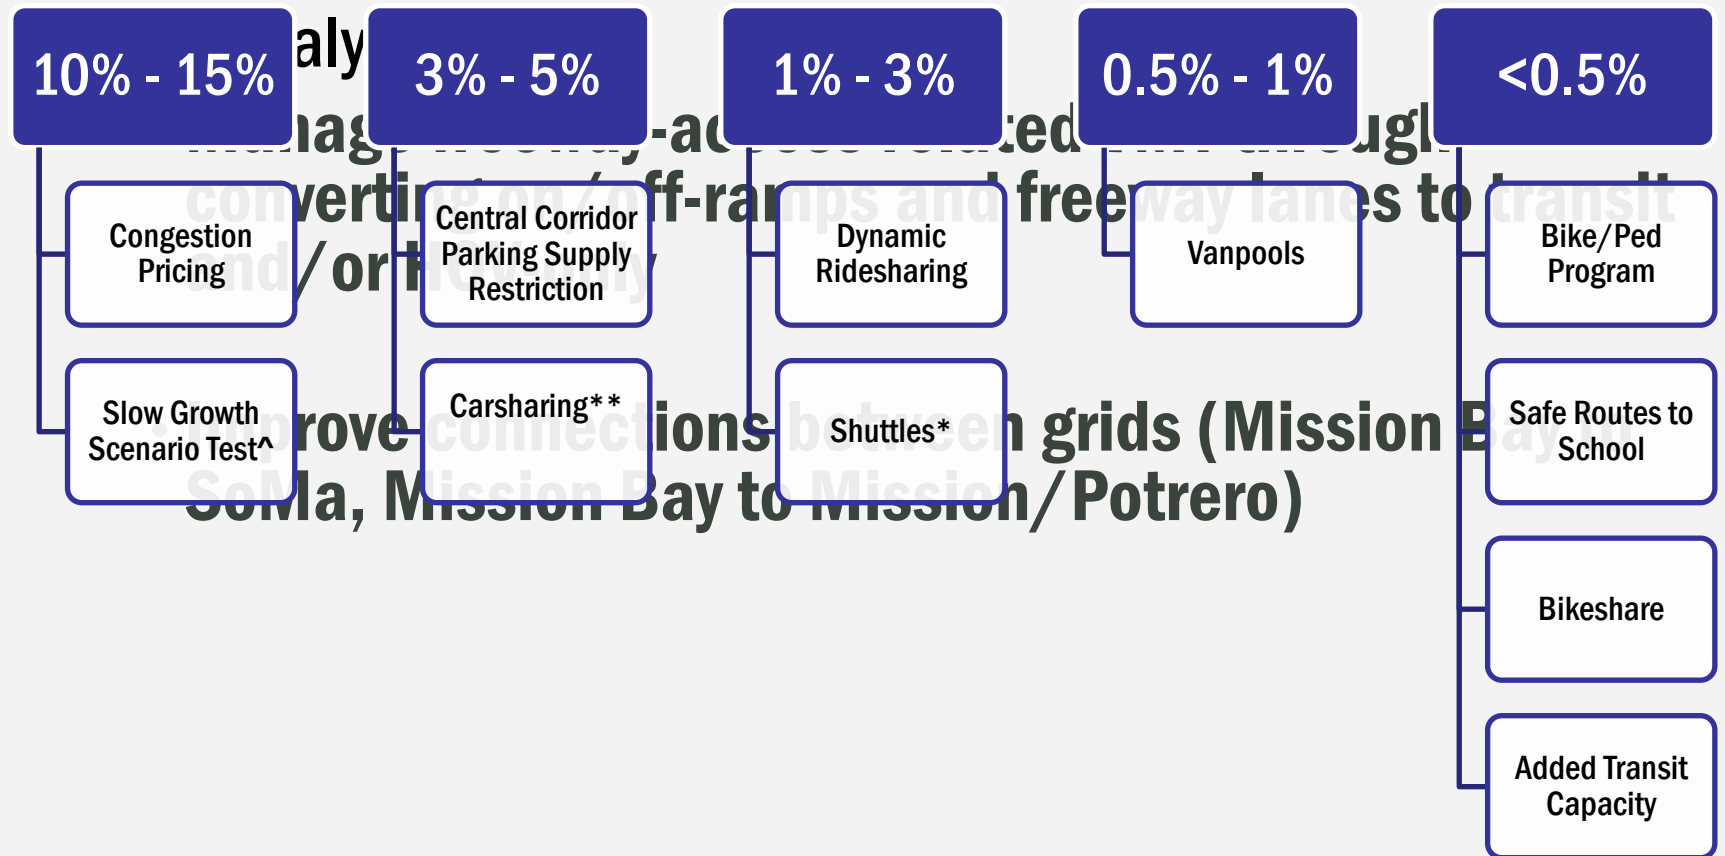

<sup>^</sup>Scenario Test for Reference

Baseline adjustment means the strategy's contribution was applied as a given and is reflected in the net 27% needed beyond our "Planned Future" scenario. Each strategy listed in bar would individually contribute the range shown (e.g. Congestion pricing on its own would contribute 10-15% reduction, as would a scenario with slower growth)

# Recommendation for Problem 1: We need to do all of these (and more)

\*Baseline Adjustment

\*\*includes Baseline Adjustment

<sup>^</sup>Scenario Test for Reference

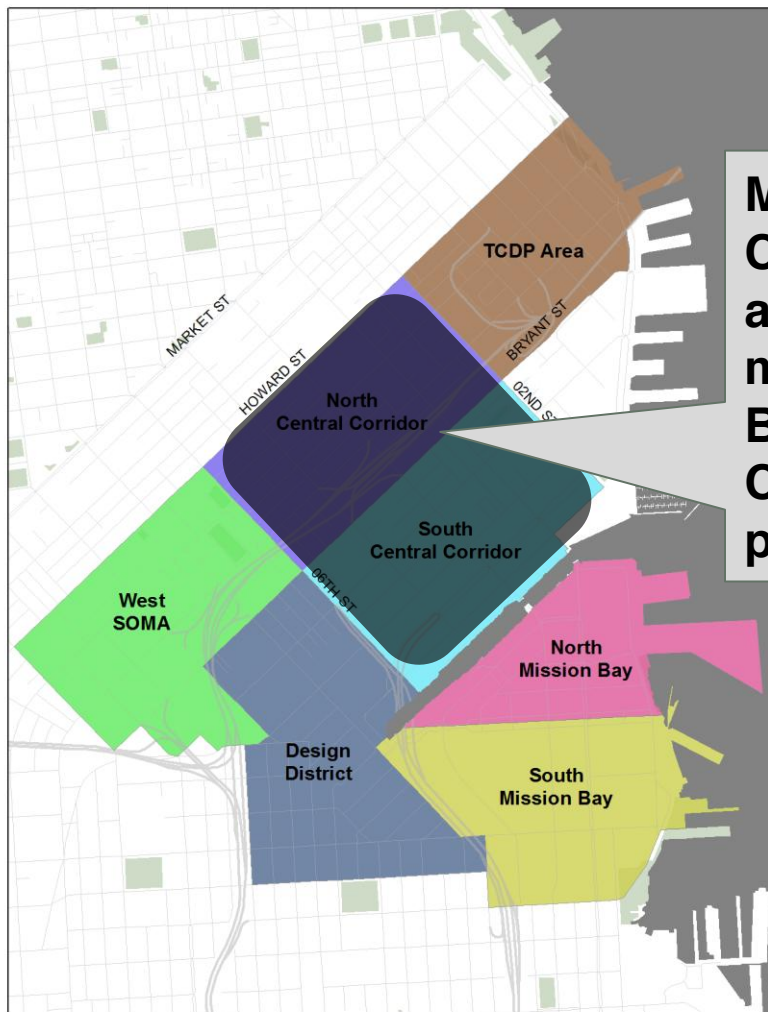

Baseline adjustment means the strategy's contribution was applied as a given and is reflected in the net 27% needed beyond our "Planned Future" scenario. Each strategy listed in bar would individually contribute the range shown (e.g. Congestion pricing on its own would contribute 10-15% reduction, as would a scenario with slower growth)

# Potential market to target: auto trips under 2 miles

If ALL auto trips under two miles to/from SoMa/Mission Bay were shifted to other modes, 7% out of the 27% would be achieved\*

\*assumes no new auto vehicle trips are induced as a result of capacity created

**Most opportunity in Central Corridor, ~1/2 of all auto trips under two miles in SoMa/Mission Bay start or end in Central Corridor (3 hour pm peak)**

Source: SF-CHAMP 4.3, 3 hour pm peak

# Problem 1 Finding: A 27% Reduction Might Not Be Achievable

- Many strategies induce new trips of all modes rather than reduce auto traffic

## Recommendations for Problem 1

- Package of demand management and mobility improvements are essential but cannot get us all of the way
- Focus should be on making transit/cycling/walking trips work in congested conditions
  - More sophisticated signaling, “Don’t block the box” intersection enforcement, automated camera enforcement
  - Self-enforcing transit-only lanes, cycletracks, wider sidewalks
  - Transit/bike/walk-only streets
  - Grade-separated transit (e.g. subways)

Increasing  
Challenge/Cost  
↓

# Problem 2: Even with a functioning network, transit performance issues are present

## Slow bus speeds (1-hour pm peak)

Source: SF-CHAMP 4.3 volumes for 2035  
Baseline with Development, (source:  
SimTraffic Fehr + Peers, 2012)

## Crowding (3-hour pm peak, 2035 baseline with development)

**Near Crowding:** Muni:  
0.75-0.85 load;  
Regional=0.85 load  
**Crowded:** Muni: 0.85-  
1.5 load; Regional=1-  
1.5 load; **Overcrowded:**  
Muni/Regional: >1.5  
Load

— Near Crowding  
— Crowded  
— Over-Crowded

— Muni Local  
— Muni Rapid  
— Muni Rail  
— Regional Bus  
— BART

Source: SF-CHAMP 4.3

# Recommendations for Problem 2

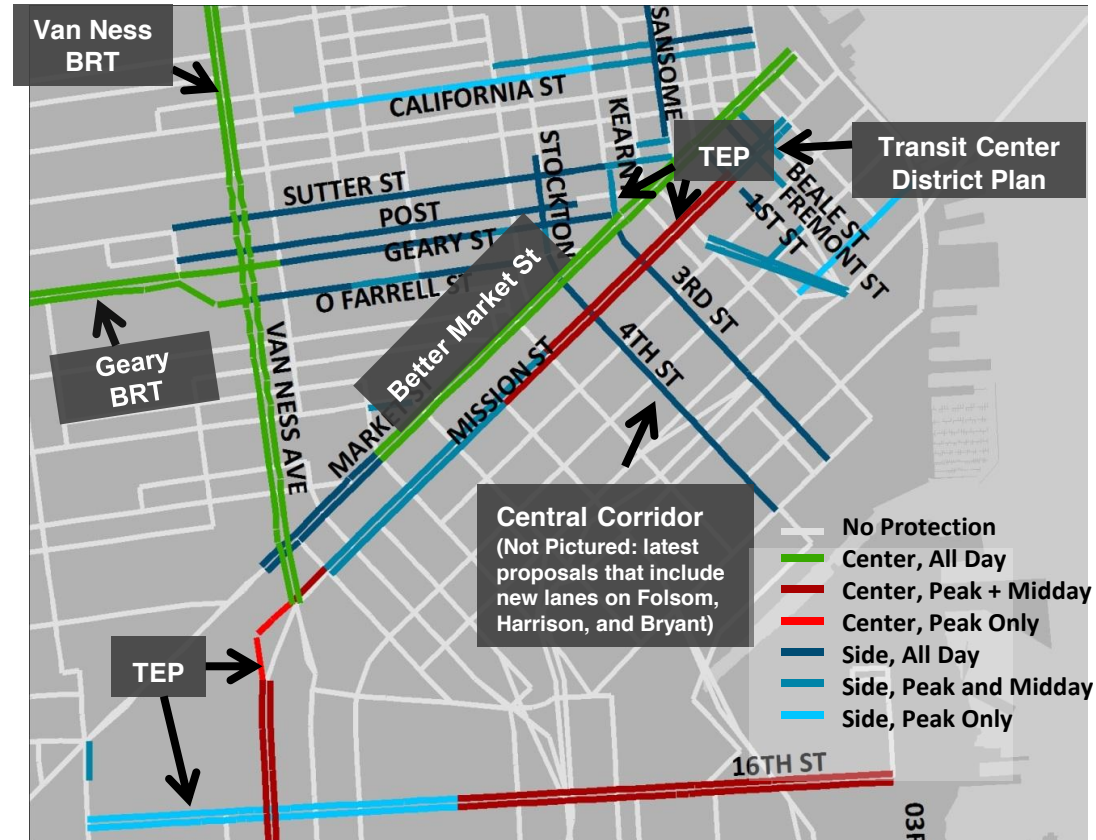

## 1. Significantly more transit-only lanes:

- Additional SoMa N-S pair
- E-W pair south of freeways
- Upgraded connection from south (e.g. Bayshore-Potrero)

## 2. Higher capacity and more frequent service is needed to address crowding

## 3. Protection for transit on freeways and freeway ramps are needed (HOV lanes)

### Existing and planned transit-only lanes

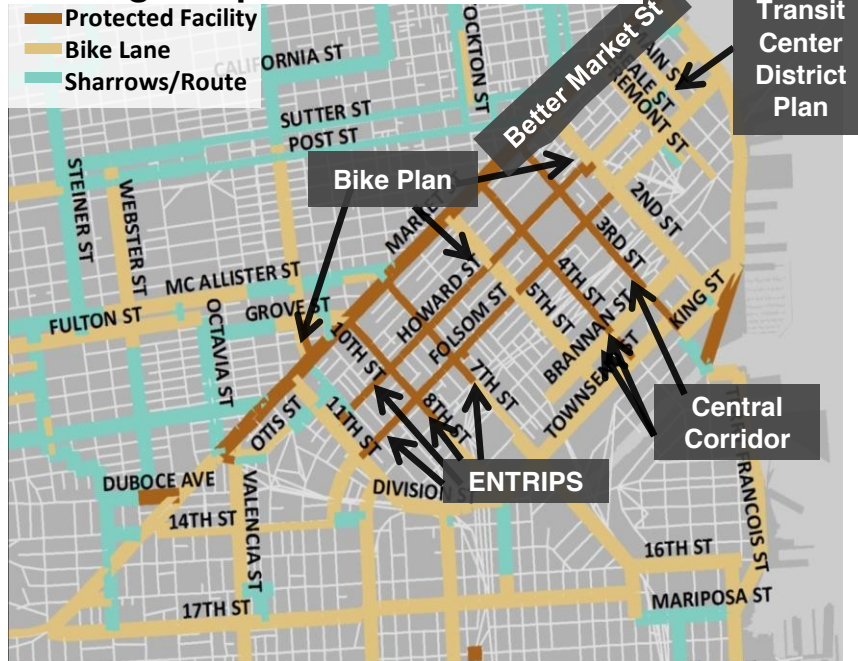

# Recommendations for Problem 3

1. Widen sidewalks to BSP standards, upgrade Class II and III bikeways to higher treatment and fill connectivity gaps.

## Existing and planned bike facilities

## Planned sidewalk widths

2. “Program-level” improvements (e.g. bike parking, mid-block pedestrian crossings, education as per SFMTA Bike, Pedestrian strategies)

# Next Steps Recommendations

- **Support work already underway, including:**
  - Central Corridor transportation, Better Market Street
  - Pedestrian, Bicycle Strategy & Arterial-focused Traffic Calming
  - TEP/Fleet Plan
  - TDM Partnership Project, Citywide Parking Pricing and Regulation Study
  - Caltrain Electrification/Downtown Extension, HSR
- **Need for new studies/additional work**
  - Freeway/Ramp Planning study
  - Transit Performance Initiative conceptual planning
  - Grid repair/connections conceptual planning
  - Advance congestion pricing (EIR)
  - Long-range Transit Network /Capacity Study (Muni, BART)

# Policy Linkages to the SFTP

- **Strategic Policy Initiatives**
  - Local to Regional Connections
  - Transportation Demand Management
  - Project Delivery
  - Revenue strategy
- **SFTP Investment Scenarios: Financially Constrained and Vision**
  - SoMA Core Circulation Program
  - Long-range rail and rapid network development
  - FPI, TPI, TDM/parking and pricing, bike/ped/traffic calming
  - Priority Development Area: Transportation Investment & Growth Strategy

# Study Goals and Purpose

- Core Network Circulation Study is a focused Study to analyze cumulative impact of growth and changes to transportation network
- Identify transportation performance problems and proposed recommendations:
  - Support for work already underway
  - Call for additional studies/planning
- Incorporate into SFTP
  - Investment strategy (Financially constrained and Vision)
  - Policy recommendations
