Stamen Design

Eric Rodenbeck
Hi SPUR!

San
Germano
Chisone

Cantalupa

Roletto

Via Nazionale

Prarostino

The background of the image is a dark, monochromatic map of a city's street grid. The grid lines are thin and light gray, creating a complex pattern of squares and rectangles. A prominent diagonal road cuts across the grid from the upper left towards the lower right. In the upper right quadrant, there is a faint, glowing white area that suggests a specific location or a point of interest. The overall aesthetic is technical and data-driven.

Leveraging visualization for storytelling

Claudia Preciado

Sr. Transportation Planner

claudia@remix.com

AGENDA

- What is Remix?
- What is the purpose of a transit map?
- Remix + Transit Agencies
- Where is mapping going?

REMIX

A planning platform for public transit.

Use it to plan everything
from a detour to a system
redesign.

Storytelling is powerful.

Visuals are integral to
storytelling.

Maps are a transit agency's
visual of choice.

**If ideas get stuck because not enough
people can understand your plan**

**Then when plans are easy to understand,
*change happens.***

California Love: 37 agencies across CA work with Remix!

Foothill Transit

SFMTA
Municipal Transportation Agency

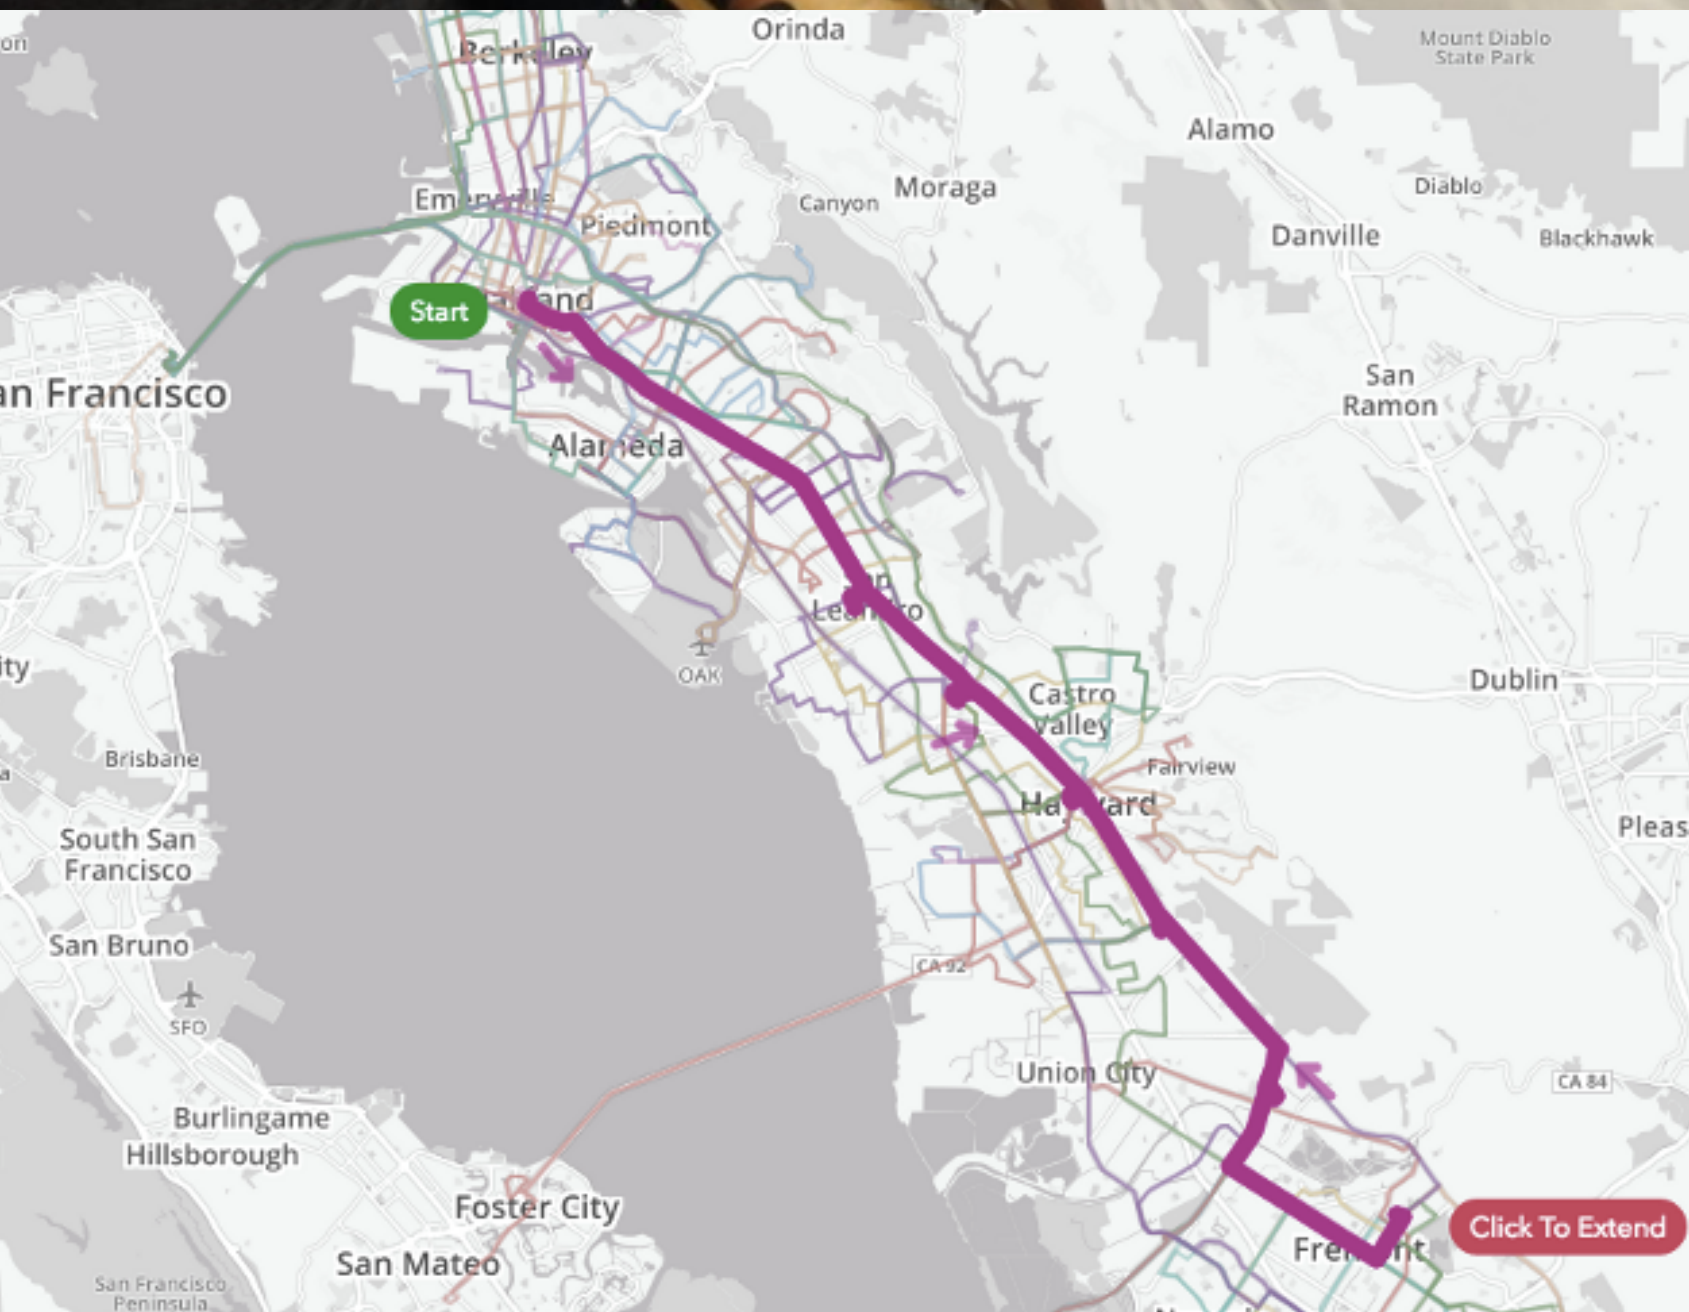

CUSTOMER STORIES

AC Transit (Oakland, CA) reimaged their bus network after a ballot measure expanded their operating budget by 14%.

RESULTS

- Developing route scenarios dropped from 1.5 days to 30 minutes (24x productivity increase)
- Productivity during meetings increased 2x and average meeting length was cut in half
- New hires on-boarded in half the time
- Training drivers on the new network took 90 minutes

New and Modified Service

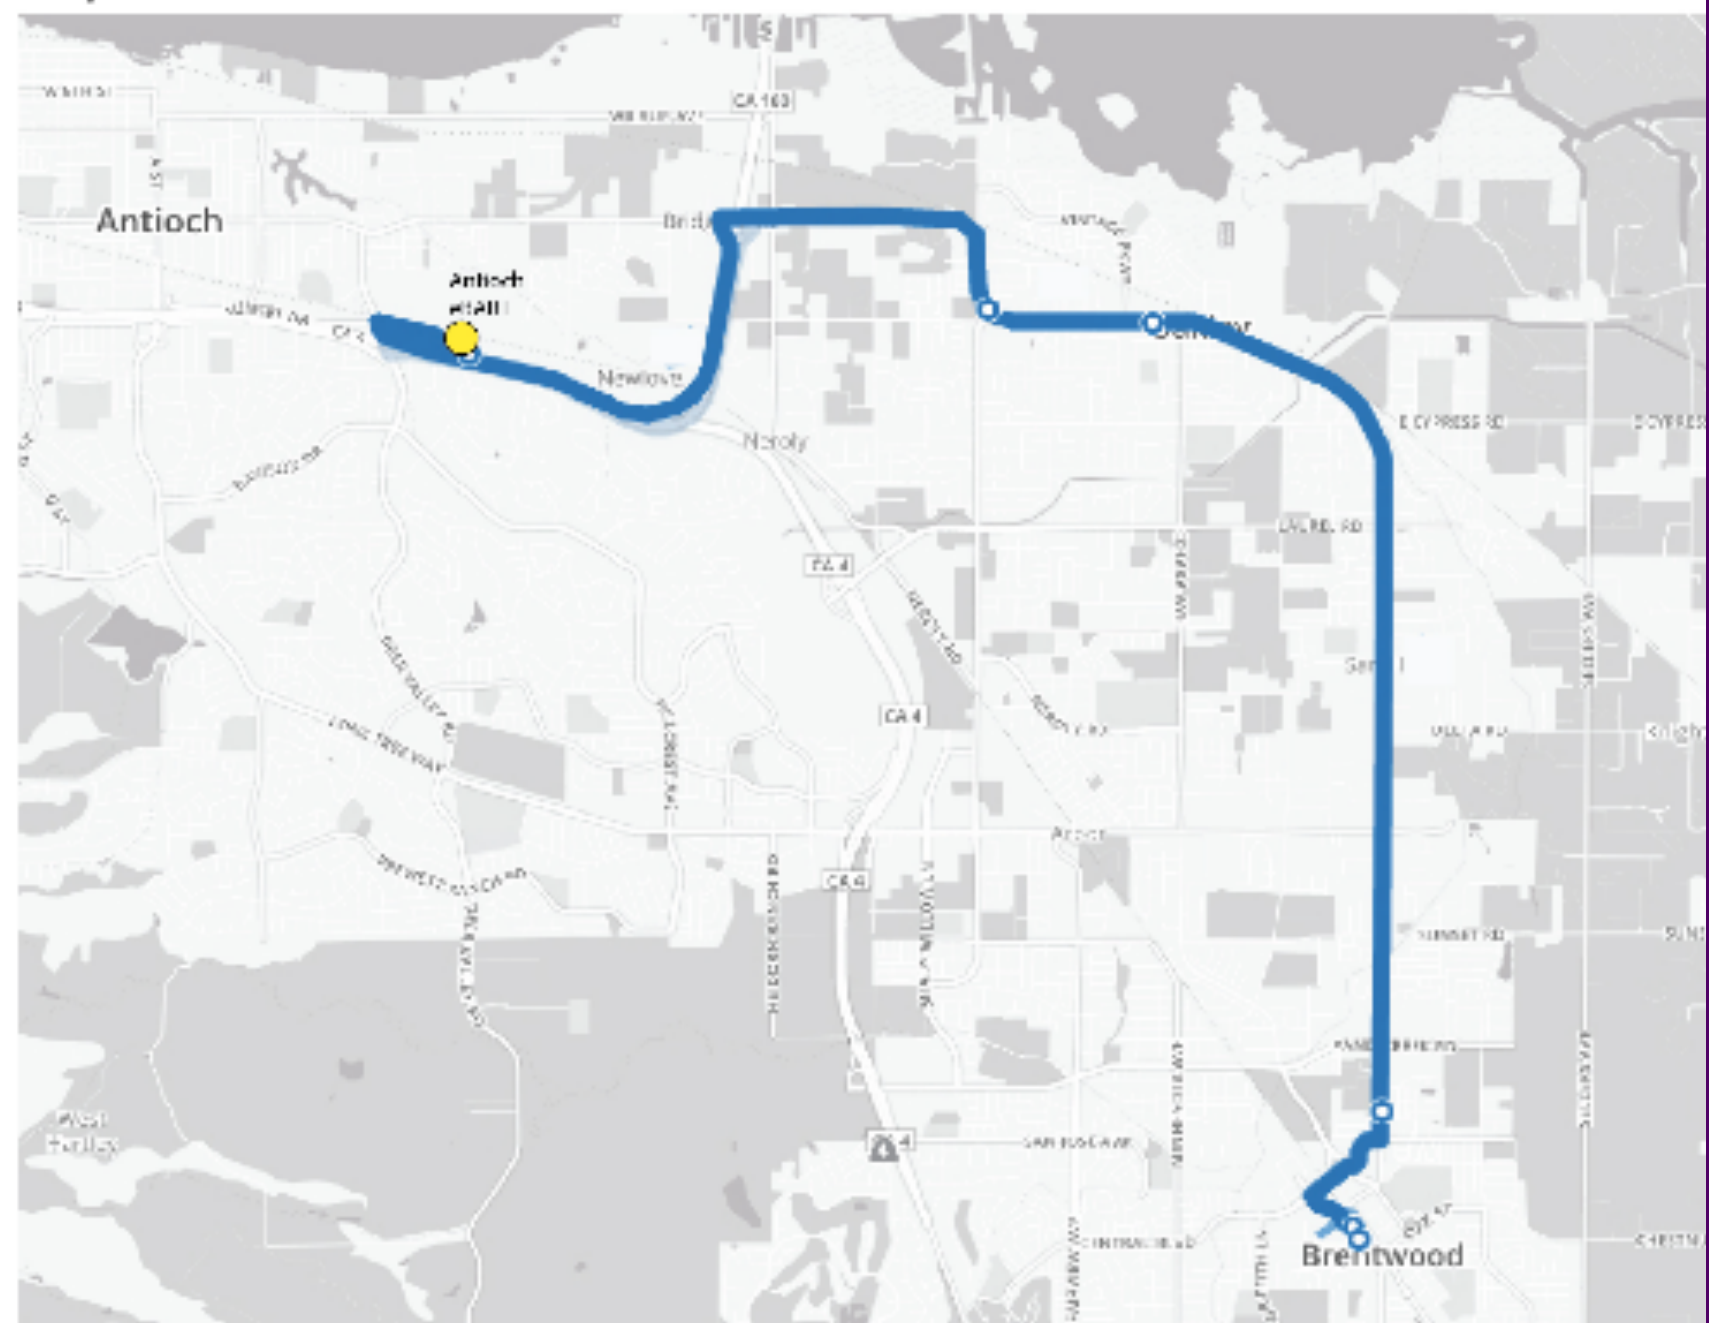

Help us shape the future of public transit in your community. Tri Delta Transit is planning for the arrival of BART in Antioch and Pittsburg. We want your input on how to improve our current and future bus routes and schedules. Please take a few minutes to complete this questionnaire. Your voice counts!

The next 250 individuals to complete this online survey will receive a free General Public Day Pass (value \$3.75). You must share your name and contact info at the end of the survey to receive the free pass.

Thank you!

1. Routes 300, 380, and 387 are proposed to be changed to end at the new Antioch BART Station. Do you have any comments about these proposed changes?

Proposed Route 300

Proposed Route 380

CUSTOMER STORIES

Tri Delta Transit used Remix to strengthen their public outreach efforts by gathering feedback online.

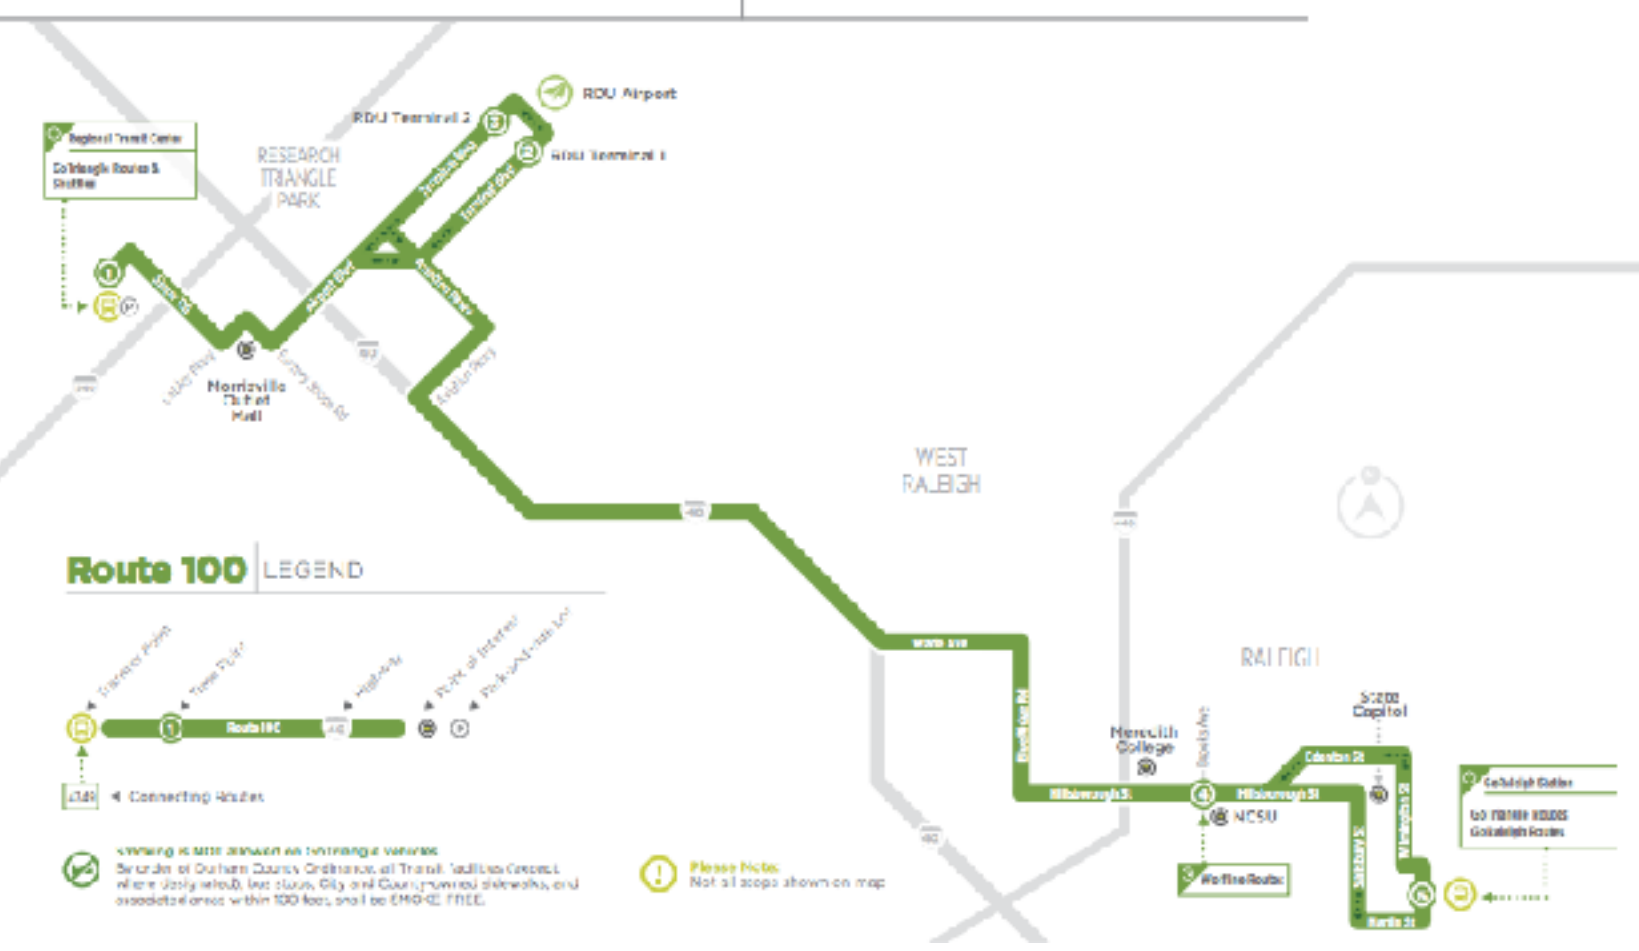

RESULTS

- Tri Delta Transit is planning for the arrival of BART in Antioch and Pittsburg. Needed public input on how to improve current and future bus routes. Used Remix to visually explain options in an online survey.
- Now, Tri Delta is running more analysis in house versus consulting out (e.g. Title VI)

ROUTE 100

REGIONAL TRANSIT CENTER
RDU INT. AIRPORT
DOWNTOWN RALEIGH

ROUTE 300

REGIONAL TRANSIT CENTER
CARY
DOWNTOWN RALEIGH
MON. - FRI. & SAT.

CUSTOMER STORIES

GoTriangle (Durham, NC) used Remix to enhance early collaboration during Wake County's Long-Term Transit Plan.

RESULTS

- After moving to Remix, time needed to plan route scenarios dropped from 1 day to 1 hour
- Advisory committee members learned GoTriangle's transit network in minutes, instead of over the course of multiple meetings
- 18 agencies and local gov'ts closely collaborated on the Wake County Transit Plan, including Wake County, the City of Raleigh, the City of Durham, and the Town of Cary

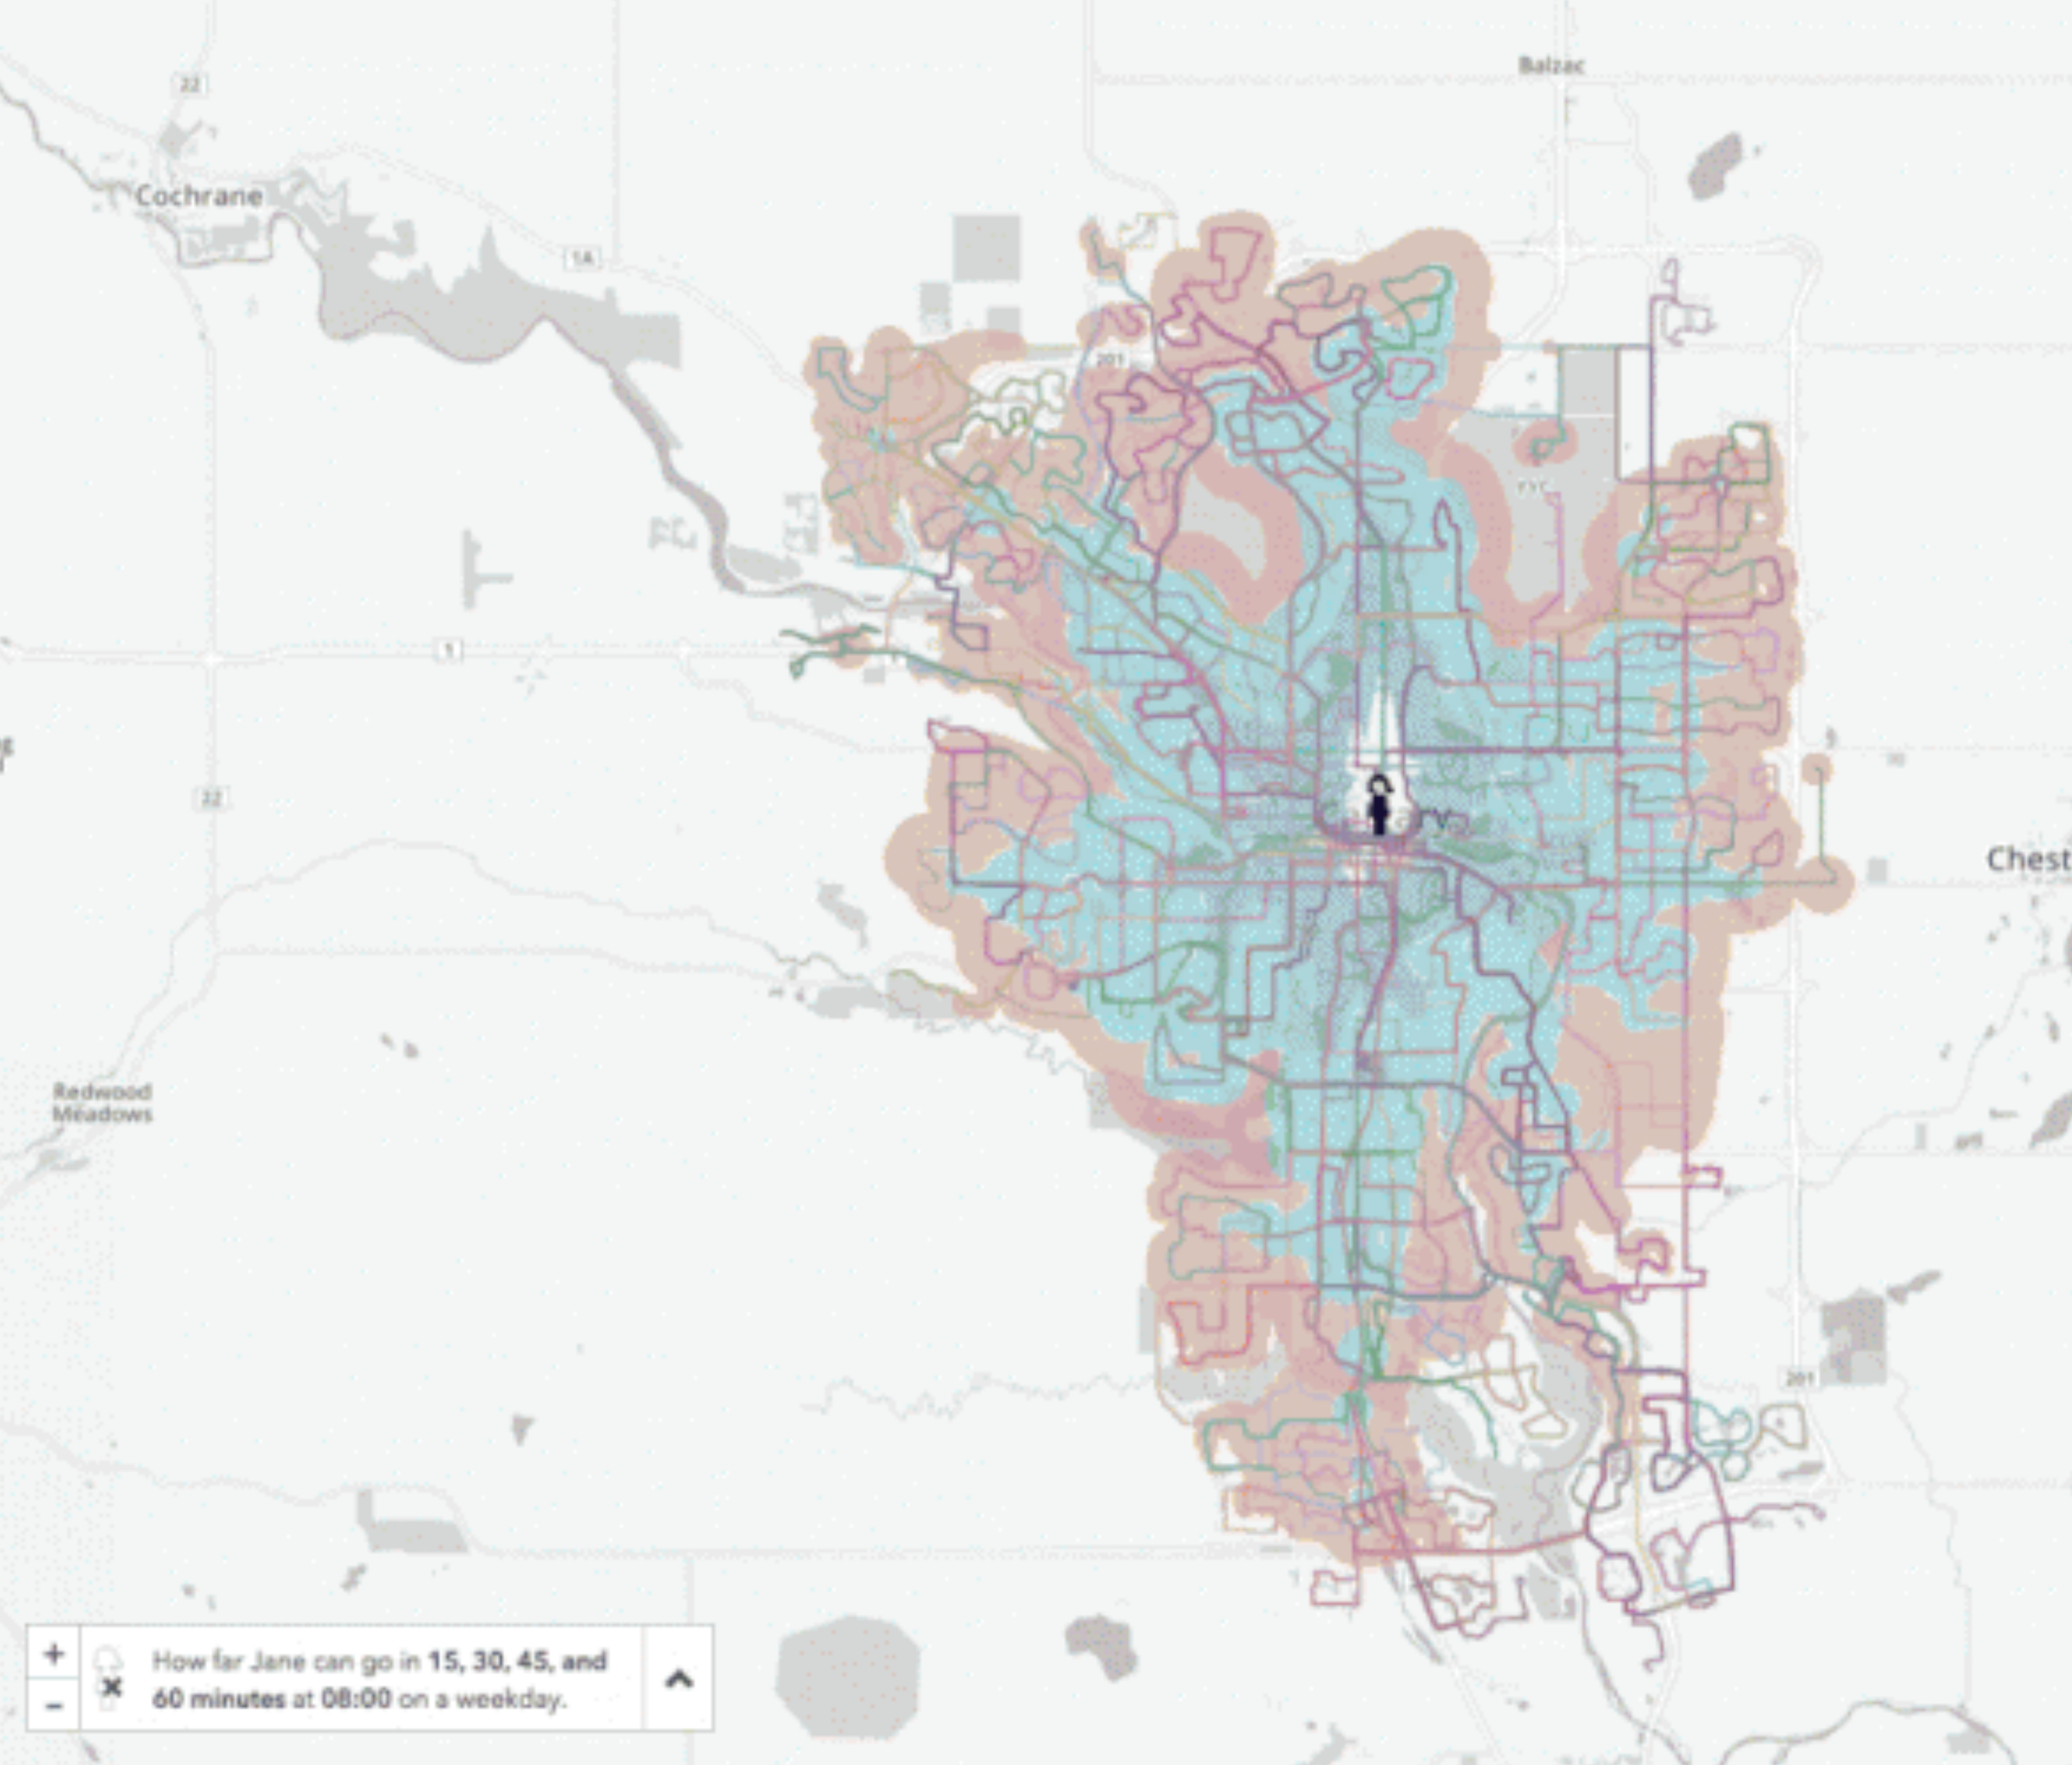

THE CASE FOR BETTER MAPS

Maps conveyed **dense, hierarchical** information—hoping the user would extract meaning.

THE CASE FOR BETTER MAPS

Digital maps of today can be **focused** to help convey **specific information.**

THE CASE FOR BETTER MAPS

Future transit maps will need **customization and choice** integrated at the **segment level**.

THE CASE FOR BETTER MAPS

Future transit maps will need to show rapidly changing realities.

THE CASE FOR BETTER MAPS

But, future transit maps will need to be cognizant of data access.

If the purpose is to convey information about connections and navigation, the map in our hands (or pockets) won't be enough

Wayfinding, station design, real-time arrival, interactive maps, and more will all be critical to fulfilling this purpose

In order to help people understand our connected networks

Provide thoughtful, powerful visualization and design

thank you!

Claudia Preciado

Turn-by-Turn

Global, open-source, multimodal routing engine.

The screenshot displays the Mapzen Turn-by-Turn routing application. The interface includes a navigation menu at the top with options: Demo, Overview, Get Started, Community, and Documentation. The main map area shows a route from point A (114 Armstrong Avenue, Staten Island, New York, NY, USA) to point B (1 Industrial Lane, New Rochelle, NY, USA). The route is color-coded: white for walking, orange for the ferry, green for the train, and red for walking. A sidebar on the left provides detailed instructions and timing for each segment of the journey.

- 🚆 Enter the St. George Ferry Terminal Station. Follow signs for NYC DOT.
- 🚆 Depart: 10:30 AM from St. George Ferry Terminal.

Leaflet | Tangram | © OSM contributors | Mapzen

Transit options	Description
<code>use_bus</code>	User's desire to use buses. Range of values from 0 (try to avoid buses) to 1 (strong preference for riding buses).
<code>use_rail</code>	User's desire to use rail/subway/metro. Range of values from 0 (try to avoid rail) to 1 (strong preference for riding rail).
<code>use_transfers</code>	User's desire to favor transfers. Range of values from 0 (try to avoid transfers) to 1 (totally comfortable with transfers).
<code>transit_start_end_max_distance</code>	A pedestrian option that can be added to the request to extend the defaults (2145 meters or approximately 1.5 miles). This is the maximum walking distance at the beginning or end of a route.
<code>transit_transfer_max_distance</code>	A pedestrian option that can be added to the request to extend the defaults (800 meters or 0.5 miles). This is the maximum walking distance between transfers.
<code>filters</code>	<p>A way to filter for one or more <code>stops</code> , <code>routes</code> , or <code>operators</code> . Filters must contain a list of Onestop IDs, which is a unique identifier for Transitland data, and an <code>action</code> .</p> <ul style="list-style-type: none"> <code>ids</code> : any number of Onestop IDs (such as o-9q9-bart) <code>action</code> : either <code>exclude</code> to exclude all of the <code>ids</code> listed in the filter or <code>include</code> to include only the <code>ids</code> listed in the filter

The future of transit maps is **customizable**

1. To unique mobility needs

2. To understand service needs

The future of transit maps is **customizable**

1. For unique mobility needs
2. For understanding service needs
